DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the two components container must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 11 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the dispensing unit, does not reasonably provide enablement for obtaining a pasty product by mixing of two components. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

The examiner asks, how do you obtained a liquid to pasty consistency by the mixing of at least two components? As recited in claim, 7 line 2.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3754

5. Claims 10 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It appears that the packing and dispensing unit claimed in claims 10 and 11 is a double inclusion of the bag and outer casing that forms a packaging and dispensing unit claimed in claim 1, lines 6 and 7.

In light of the above informalities, the claims have been examined as could best be understood by the examiner. The examiner's failure to apply prior art to any claims should not be construed as an indication of allowable subject matter.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,312,018 to Evezich.

Evezich shows a container and dispensing device for flowable material as seen in Figs. 1-20, a deformable flexible wall 302, the use of a pump to dispense the content see column 2, line 15, an outer casing 296, a rigid area 300, attaching means between the casing and the container 312, a flange 84 in the neck 304, ratcheting rings 310 and 312, and a V-groove 300.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fillmore shows a squeeze dispenser package for viscous product. Mack shows a squeezable dispensation container. Evezick ('416) shows a device for containing and dispensing flowable material. Zrinyi shows an aerosol apparatus. Everett shows a pressure container with rigid band. Everett ('265) shows a bag lined pressure container. Fillmore et al. shows a dispenser package for dual viscous products.
